SPECIFICATION FOR WELDED UNS N08120, UNS N08800, UNS N08810, AND UNS N08811 ALLOY TUBES

SB-515

[Identical with ASTM Specification B 515-95(2014) except certification has been made mandatory.]

1. Scope

1.1 This specification covers welded UNS N08120, UNS N08800, UNS N08810 and UNS N08811 alloy boiler, heat exchanger, and condenser tubes for general corrosion resisting and low or high-temperature service.

1.2 This specification covers tubes $\frac{1}{8}$ to 5 in. (3.18 to 127 mm), inclusive, in outside diameter and 0.015 to 0.500 in. (0.38 to 12.70 mm), inclusive, in wall thickness. Table 2 of Specification B 751 lists the dimensional requirements of these sizes. Tubes having other dimensions may be furnished provided such tubing complies with all other requirements of this specification.

1.3 The values stated in inch-pound units are to be regarded as the standard. The SI units given in parentheses are for information only.

1.4 *This standard does not purport to address all of the safety concerns, if any, associated with its use. It is the responsibility of the user of this standard to become familiar with all hazards including those identified in the appropriate Material Safety Data Sheet for this product/material as provided by the manufacturer, to establish appropriate safety and health practices, and determine the applicability of regulatory limitations prior to use.*

2.1 ASTM Standards:

B 751 Specification for General Requirements for Nickel and Nickel Alloy Welded Tube

3. Ordering Information

3.1 Orders for material to this specification should include the following information:

3.1.1 *Quantity* (feet or number of lengths),

3.1.2 *UNS Number*,

3.1.3 *Size* (outside diameter minimum or average wall thickness),

3.1.4 *Length* (random or specific),

3.1.5 *Class*,

3.1.6 *ASTM Designation*,

3.1.7 *Product Analysis* — State if required,

3.1.8 *Certification* — Certification and a report of test results are required, and

3.1.9 *Purchaser Inspection* — State which tests or inspections are to be witnessed, if any.

4. Materials and Manufacture

4.1 Tube shall be made from flat-rolled alloy by an automatic welding process with no addition or filler metal. Subsequent to welding and prior to final annealing, the material shall be cold-worked in either the weld metal only or both weld and base metal.

4.2 Tube shall be furnished with oxide removed. When bright annealing is used, descaling is not necessary.

5. Chemical Composition

5.1 The material shall conform to the composition limits specified in Table 1. One test is required for each lot as defined in Specification B 751.

5.2 If a product analysis is performed, it shall meet the chemistry limits prescribed in Table 1, subject to the analysis tolerances specified in Table 6 of Specification B 751.
